Do you already know our HD Containers?

If not, it's high time!

In this newsletter, you will learn everything you need to know about our innovative HD Containers - from their special functions and wide range of applications to their quick and easy assembly.

Experience their efficiency and reliability for yourself

HD-Container - PVC or TPU?

The foldable PVC HD-Container provides a fast and efficient solution for preventing leaks and spills.

Designed with high resistance to petroleum products and acids, these containers can endure point loads of up to 55 tons.

With a durable **PES/PVC** coating (680 g/m²) and a tool-free plug-in system, assembly takes just a few easy steps. Welded reinforcements in the side walls enhance stability, while an integrated drain valve allows for controlled emptying. For convenience, a carrying bag is included for easy transport and storage.

The foldable HD-Container TPU provides protection against unwanted leaks of liquids such as water, crude oil, or chemical substances. These containers are chemically **resistant to kerosene**, as well as wear and hydrocarbons, and can withstand point loads of up to 55 tons.

Made from **TPU** (thermoplastic polyurethane), a flexible yet durable material, these containers offer the elasticity of rubber combined with the strength of plastic. With high abrasion resistance, chemical resistance, and durability, TPU is ideal for demanding industrial environments.

Their mobility and foldability make them perfect for use in industrial plants, fuel depots, and rocky shores. Thanks to a tool-free plug-in system, they can be quickly set up on almost any surface. An integrated drain valve ensures controlled emptying of collected liquids.

The containers are constructed from a bright orange membrane, coated on both sides with polyurethane and polyester fabric (960 g/m²). Aluminum struts provide added stability, and the collapsible ends allow vehicles to pass through easily.
